# RESEARCH

CHALLENGE STATEMENT

Improve the access to high-quality legal services for private persons and small businesses by enabling them to use AI at the function of the cost without external assistance.

THEMES

PROBLEMS

Employment contacts
Reading contracts and translating from legalish to everyday language

Database access
Don't have access to database of precedents

Consumer protection
Easier to get informed about your rights

Predicting solutions
Not having the ability to use previous court cases to predict outcome of a particular court case

Startups
hard to get informed what documentation it is required

Evaluating information
legal briefs and written arguments may be hard for some lawyers to evaluate

Lawyers
Saving time on repetative tasks and learning about other legal branches

Inconsistent documents
Having up-to-date documents both in the transactional and litigation spheres.

Intelectual property
Automating and explaining the process of idea protection

Large data
Factoring a large group of data is almost impossible for a human

Complex legal system
missing documents, legal research

Automating tasks
Manual tasks done by humans needs automating

Availability
Improve legal information in isolated places

Generating documents
Generating documents from scratch takes away time

AI represents an element of our future in legal system

AI has benefited lawyers and small law firms the most by providing them with the information and resources. Legal research is the most important aspect of practicing law and because of technology, it has undergone a series of developments. The development of AI will drastically improve the research of legal documents.
